

PolySpray

Project

Clarifier Tanks & Troughs - 13,400 sq feet

Installer

E.B Miller Contracting, Inc.

Engineered Solution

PolySpray SS-100

Substrate / Area

Steel – Abrasive Blast to SSPC 6 / NACE 3

The Problem:

The pretreatment tanks for the leachate system at the landfill showed extensive corrosion. This led to the investigation of a solution to line the interior surfaces of the tanks.

The Solution:

HydraTech personnel visited the site and recommended the PolySpray SS-100. PolySpray is a 100% solids, no V.O.C. liner that has extraordinary toughness and flexibility. Samples of the PolySpray SS-100 were provided to the client to test the compatibility of the proposed lining. The product was tested and deemed compatible. The tanks were cleaned and surface prepared according to directions and tanks were lined with the PolySpray SS100.
